CEO LinkedIn

Team

Hyungyu RYU | CEO
- PLC & Hardware Programer
- plant Reactor(P&ID,CAD) design engineer

Jaehyung KIM
- MRV / LCA
- Worked as ESG consultant
- PhD in Environmental Engineering

Lalit Goswami
- Bio & Chemical Chief Research
- Gachon University Assistant Professor
- Process Flow Diagram & Reactor design

Prof. Seungdae OH
- Technical Advisor
- Environmental engineering professor
- LCA and carbon neutrality research

4,000 tCO_2

First-project target for 2026–2027
Subject to certification and verification

Problem

- Forest residues and biogenic CO_2 streams offer carbon removal opportunities that need viable projects and buyers.
- Industrial partners need project development, credible carbon accounting and a route to international credit sales.

Solution

- We develop Korean carbon removal projects with industrial partners, starting with biochar and pursuing CO_2 mineralization.
- We combine project origination, MRV and life-cycle assessment with certification support and international buyer engagement.

Project Pipeline

Initial project: biochar in Gimje

CV Biochar collaboration targeting 4,000t CO_2 in 2026–2027, subject to certification and verification.

Feedstock expansion: pine wilt residues

Planned pathway: convert pine-wilt-damaged wood into biochar for durable storage. Seeking feedstock and deployment partners.
=> Discussions are underway with the Miryang-city Forestry Cooperative in Korea regarding the installation of a demonstration Biochar plant.

Next demonstration: biogenic CO_2 mineralization

A project to mineralize CO_2 from a dedicated biomass power plant using steel slag. Preparations for a bench-to-pilot scale demonstration are currently underway, targeting 2027.

Business Model

- Performance-based share of issued and sold carbon removal credits.
- Illustrative biochar split: 70% to producers and 30% to greenMRV, subject to project agreements.

Business Snapshot

- 2 MOUs: CV Biochar for demonstration and Newton for carbon MRV software collaboration.
- Digital MRV demonstration discussions and initial outreach to global carbon removal buyers are underway.

Seeking Opportunities

- CDR buyers: conditional pre-purchases and long-term offtake.
- Co-developers: biomass plant hosts, slag supply and mineralization technology for a joint pilot.
- Investors: capital for project development and pilots.
