Team

Chungho LEE | Co-Founder & CEO

- Former Senior Manager, ESG Management, Hanwha TotalEnergies; ex-Hanwha Q CELLS Malaysia
- Harvard Kennedy School (MPA/ID); B.S. Chemistry, Yonsei University

Junbong JEON | Co-Founder & CBO

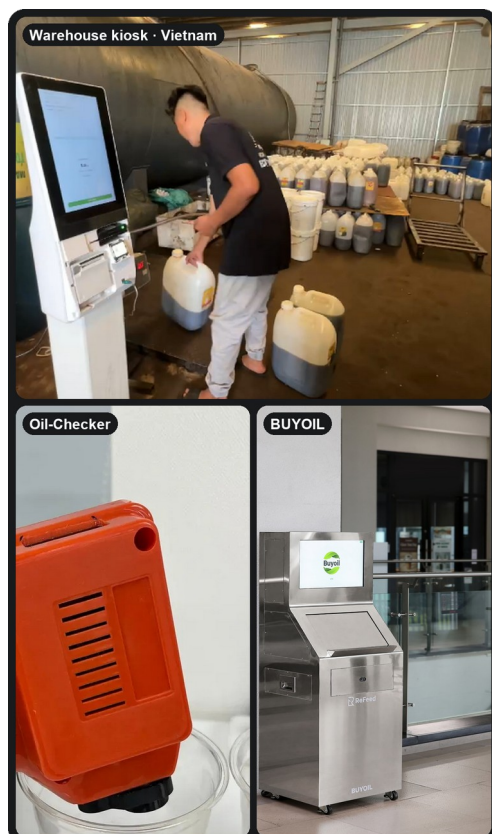

- 10 years at Hanwha TotalEnergies in naphtha feedstock procurement and gasoline trading
- M.S. Energy Commodity Trading & Financial Engineering, UNIST

Jeonghwan YOU | Co-Founder & COO

- CEO of ECO OIL Vietnam, ReFeed's UCO collection and trading subsidiary, since 2023
- Former Senior Manager, Asan Nanum Foundation; Antler Entrepreneur

Byeongkyu KIM | CPO

- Former CPO / Creative Director of two consumer brands; market entry across 11 countries
- Hanwha Life: expanded the Dream Plus startup ecosystem to 4 countries

Problem

- SAF mandates are rising, yet refiners cannot reliably buy UCO: no exchange exists, only fragmented 1:1 OTC deals
- Waste has no market standard (no quality spec, no metering method), so volume cannot be graded or priced with confidence
- Traceability is all-or-nothing: one broken link in the chain of custody voids certification, and "fake UCO" fraud persists

Solution

- A waste-commodity exchange that lists only volume verified for both quality and traceability, starting with UCO
- Real-time quality grading with ReFeed's Oil-Checker plus near-infrared analysis co-developed with MIMOS, Malaysia's national research institute
- A digital chain of custody from generation to refinery, cross-checked at the warehouse and ready for ISCC certification

Key Features

- Oil-Checker: handheld ultrasonic and conductivity sensing; an AI model predicts acid value, moisture and iodine value on site
- Vision-AI collection app and warehouse kiosk: collection records are matched to weighed intake before any load moves on
- Data Passport: origin data captured beyond ISCC EU requirements, automating certification and renewal for collectors

Business Model

- Direct collection & trading: ReFeed collects UCO in Vietnam and sells verified volume to refiners and traders
- Data Passport toll: a per-tonne fee on every volume whose origin is certified through ReFeed's system
- Index clearing fees: derivatives and clearing built on the ReFeed Index, a benchmark price for waste commodities

Business Snapshot

- Pre-A stage, backed by institutional investors from Korea and Singapore; preparing Series A
- Vietnam: own UCO collection and trading operation with 3,000t+ traded, 1,200+ accounts and 10%+ monthly growth
- Korea: Data Passport captured 35% of domestic UCO data in year one; targeting 100% by end-2027
- ISCC EU certified (Vietnam); Minister of Environment Award 2024; P4G TOP 3 2025; TechFest Vietnam 1st Place 2025
- Expanding: India entity established, Brunei hardware-export LOI, Japan solution-export talks

Target Customers

- SAF and renewable-fuel producers, refiners and commodity traders buying UCO; collectors and aggregators needing certification

Seeking Opportunities

- Series A investors focused on climate tech, commodities and Southeast Asia
- SAF producers, refiners and traders in Singapore seeking quality- and origin-verified UCO supply
- Partners to build a regional UCO price index and trading infrastructure, and SEA collection partners
